

## A Group of Roman Provincial Coins of Caesarea in Cappadocia from Niğde Museum

*Niğde Müzesi'nden Bir Grup Kappadokia Kaisareia Roma Eyalet Sikkesi*

Serhat FOÇA\*

**Abstract:** Due to the city's strategically important geographical position in the eastern part of the Roman Empire, the Caesarean mint remained active for the next three centuries, since AD 17, when Cappadocia was constituted as a Roman Province. The Caesarean coinage is distinct and displays a number of features that justify its significance. As part of this paper, we present a catalogue of selected Roman provincial coins of Caesarea in Cappadocia from the Niğde Museum's collection, denoting different legend and type combinations on the obverse and reverse of the coins. Later there follows a brief study of the variety of coins issued under the Roman sovereignty of the province from the time of Claudius to Gordianus III. Even though the legends on the coins follow the same order, the designs, particularly those on the reverse of the coins, reveal the broad diversity of the objects. The majority of the types have merely local significance, and any possible variance tends to refer to the local cults pertinent to the city, with Mount Argaeus appearing as the most commonly represented image on the coins of Caesarea. Other types are infrequently used, yet we see imperial symbols making their way into provincial coinage, alluding to historical events and conquests of the Empire.

**Keywords:** Roman Province • Caesarea • Cappadocia • Coins • Mount Argaeus

### Introduction

Located in the east of Central Anatolia and inhabited since the earliest times, the Cappadocia region has always maintained prominence due to its geographical expanse. The city of Caesarea, the subject of our study, is the most important settlement in the area, and it is

**Öz:** MS 17'de Kappadokia'nın bir Roma Eyaleti olmasıyla imparatorluğunun doğusunda stratejik olarak önemli bir konumda bulunan Kaisareia kenti, üç yüzyıl boyunca aktif bir darphane olarak varlığını sürdürmüştür. Kaisareia sikkelerindeki çok sayıdaki farklı betimlemeler bu sikkelerin çeşitliliğini ortaya koymaktadır. Bu çalışmanın katalog kısmında, Niğde Müzesi Koleksiyonu'nda korunan ve Kappadokia eyaletinde yer alan Kaisareia'nın Roma Eyalet sikkeleri incelenirken; metin kısmında Roma Egemenliği altında bir eyalet olarak varlığını sürdürmen Kaisareia'nın, Claudius'dan III. Gordianus'a kadar olan zaman aralığını kapsayan sikkeler ayrıntılarıyla açıklanmaktadır. Bu sikkelerin ön ve arka yüzlerindeki yazılar çok değişkenlik göstermezken, özellikle arka yüzü olmak üzere, betimlemelerde farklılıklar görülmektedir. Çalışmada incelenen sikkelerin coğunuğu yerel özellikler ağır basmakta olup, kentin kültür ile ilgili betimlemelerine yer verilmiştir. Bu bağlamda, Kaisareia sikkelerinin üzerinde en çok kullanılan betimleme Argaios (Erciyes) Dağı olarak göze çarpmaktadır. Buna karşın tarihsel olaylar ve imparatorluğun fethettiği yerlerin gösterimlerinin yer aldığı sembolik betimlemeler daha az kullanılmaktadır.

**Anahtar Kelimeler:** Roma Eyaleti • Kaisareia • Kappadokia • Sikkeler • Argaios Dağı

Article Type: Research | Received Date: 25/10/2022 | Acceptance Date: 07/02/2023 ; Foça S. 2023, "A Group of Roman Provincial Coins of Caesarea in Cappadocia from Niğde Museum". *Cedrus* XI, 243-288.

presently located within the borders of Kayseri province<sup>1</sup>. The city was formerly called Mazaca, the royal capital of the Cappadocian kings, until the name was changed to Eusebeia by one of the kings, presumably by Ariarathes V Eusebes, between BC 163-130<sup>2</sup>. Following the use of this name, the name Caesarea began to appear between BC 11-9<sup>3</sup>. When Cappadocia became a province of the Roman Empire in AD 17, Roman dominance in the region officially began<sup>4</sup>. Since Caesarea was in a strategically important geographical position for Rome to reach the eastern part of the empire, the city had an active mint used from the time of Tiberius, when Cappadocia became a Roman province, to Trebonianus Gallus<sup>5</sup>. Hence, Caesarea carried the burden of minting silver coins for imperial dominance over the region. The silver coinage of Caesarea consists of three denominations (according to the Phoenician standard): didrachm with a maximum weight of 7.25 gr, drachm with a maximum of 3.62 gr, and hemidrachm (half a drachm<sup>6</sup>), where the Caesarean drachm is roughly equivalent to the Roman denarius and hemidrachm to quinarius<sup>7</sup>. Meanwhile, as locally controlled, bronze coins are sloppy and monotonous compared to silver coins<sup>8</sup> and bear no indication of value.

This paper is partly a catalogue of Caesarean coins. However, a study also summarizes the great diversity of designs and legends on Roman Provincial Coins of Caesarea in Cappadocia held in the Niğde Museum. The museum has an extensive collection of coins from the Hellenistic, Roman, Byzantine, and Islamic Periods<sup>9</sup>. The Roman provincial coinage lot includes over 450 coins from Cappadocia (Caesarea and Tyana combined) and approximately 90 coins from neighboring and farther provinces, including Bithynia, Cilicia, Galatia, Mesopotamia, Mysia, Pamphylia, Phrygia, Pisidia, Pontus, and Syria. Until 2018, the museum's collection of the Roman provincial coinage of Caesarea included 377 coins that were recognized as such and were obtained through purchase, donation, or confiscation. On the other hand, as the goal of this paper is to examine the variety of Roman Provincial Coins of Caesarea in Cappadocia from the Niğde Museum, the current catalogue on our paper contains only 164 coins, selected as the essential examples of that variety denoting different legend and type combinations of obverse and reverse of the coins, by omitting severely worn/poor condition, and thus less legible similar or identical struck coins.

In the following catalogue, the coins are arranged chronologically by ruler and the

<sup>1</sup> More than one settlement is known as Caesarea in Anatolian geography. The name Caesarea was not used in Anatolia before the last quarter of the I<sup>st</sup> century BC since this name is associated with the Roman emperor Augustus. Tekin 2007, 767.

<sup>2</sup> Sydenham 1978, 1-2; *BMC Galatia*, xxxiv.

<sup>3</sup> *BMC Galatia*, xxxv.

<sup>4</sup> Millar 2004, 165; Str. XII.1.4, C535.

<sup>5</sup> Tekin 1998, 215.

<sup>6</sup> In Caesarea, the accuracy of the weight of the coins was not considered important, so it was not easy to determine the size of denominations other than the regular didrachm and drachm. Sydenham 1978, 4-5. Since a hemidrachm is known to be half a drachm, this equates to around 1.81 gr.

<sup>7</sup> Sydenham 1978, 4.

<sup>8</sup> Sydenham 1978, 12.

<sup>9</sup> This research has been supported by the Scientific Research Projects Coordination Unit of Niğde Ömer Halisdemir University. Project Number: SOB2016/08BAGEP, Year.

year of their reign, beginning with silver coins, if any, and continuing with bronze, considering the coin type. Afterward, there are nine plates, which illustrate the variety of the design types of the coins.

#### A Group of Caesarean Coins from Niğde Museum

The coins in our catalogue appear to contain no examples prior to the reign of Claudius<sup>10</sup> and end with Gordianus III, year 7. Out of 164 selected coins, 40 are silver coins ranging through all the dynasties, and the remaining 124 are bronze coins. During the reigns of Marcus Aurelius, Lucius Verus, Commodus, Septimius Severus, and Caracalla, we notice a steady increase in the output of bronze. At the same time, there is a corresponding decrease in silver. Under Elagabalus and Severus Alexander, the silver coinage temporarily disappears, while the issue of bronze is the largest of any single period, including Gordianus III, with one silver coin appearing under his reign. The distribution of silver and bronze altering from emperor to emperor in our selected coin lot is seen in the following chart.

For a complete and correct evaluation, the distribution information of the coins according to the emperors of the whole Caesarean coinage from the Niğde Museum's collection is given in the second chart. Here, as we see, the alteration of the distributed silver and bronze coins stays the same as in the selected group, only with the significant increase of silver coins under the reign of Hadrianus.

<sup>10</sup> In the literature, this series of coins, such as Cat. No. 1, minted in the name of Claudius, was attributed to various cities. Firstly, by Imhoof-Blumer 1883, 181; Babelon 1898, 6746; and later as well by *SNG v. Aulock* 6347; Sydenham 1978, 58; *SNG Cop* 177; Lindgren & Kovacs 1985, 1695; *SNG Schweiz II*, 1758; Sear 2001, 470; and *SNG Anamur* 379, they were identified as Cappadocian Caesarea coins. Next, G. F. Hill assigned this group of coins to Anazarbus. *BMC Lycaonia*, 32, No. 5. Like other specimens given in Lindgren & Kovacs 1985, 1423, and *SNG Tübingen* 4535-4536. The similarity of the letter forms presented in both the *RPC I* 4084 examples and the coin discussed in K. Butcher's "Miscellaneous Provincials" suggests a connection between the coin types and attributes it to "Uncertain Caesarea" in Syria. Butcher 2011, 76. Further, it was believed that those coins were minted in Mopsus, as Mopsus called itself Caesarea during this period as well. Tahberer 2015, 47-55. Furthermore, T. Ganschow has recently refuted Imhoof-Blumer's opinion, saying that due to the style, the shape of the letters, the placement of the legends and the weight, these coins cannot belong to the Cappadocia Caesarea coin, which is simply atypical for the region. Ganschow 2018, 56.

The silver coinage consists of three denominations: hemidrachm, drachm, and didrachm. Hemidrachm coins appear under Nero, Vespasianus, Titus, and Hadrianus, the only or primarily used denomination under their reigns. Drachm is used by Vespasianus, Trajanus, Hadrianus, Antoninus Pius, and the Severian family: Septimius Severus, Iulia Domna, and Caracalla. And didrachm was used from Hadrianus' time to Commodus' time, with one billon didrachm appearing under Gordianus III. The hemidrachm, drachm, and didrachm distributions are submitted in the charts below<sup>11</sup>.

Since Caesarea was a mint for Imperial control in the East<sup>12</sup>, with the intention to

<sup>11</sup> The first three bluish charts reveal the distribution of silver coin denominations in our selected coin lot; the last three charts illustrate the distribution of silver Caesarean coin denominations in the Niğde Museum's collection.

<sup>12</sup> Fully pursuing the development of the mint was impossible since, at least in the first century, the coins of each emperor were distinct; therefore, only silver coins were used. Bronze coins were exceptional only as a local matter. Pick 1887, 316.

circulate issued money as an Imperial currency in the eastern part of the empire, the coins were usually dated in the same manner as the Imperial coinage of Rome, despite using Greek legends. Generally, the types of obverses were borrowed from Roman coins without any local styling on them<sup>13</sup>. Yet, the reverse type representing Mount Argaeus on Caesarean coins was the only exception to the rule of using Roman personifications, which usually appear on the coins in the West<sup>14</sup>.

Speaking of the legends and the types of Caesarean coins, in the next part of our work, I want to overview the peculiarities depicted on the obverse and reverse of the coins displayed in our catalogue. And draw the main lines of the picture by giving a brief view of the variety of the designs, in its inscriptions and types.

There are coins minted in the names of S. Severus, Cat. No. 72; I. Domna, Cat. Nos. 77, 79; I. Maesa, Cat. No. 108; and S. Alexander, Cat. Nos. 118, 127 that refer to new samples which still need to be recorded in published scientific catalogues or online museum collections and allow us to include them in the known examples of city coins.

### Obverses of the Coins

#### Legends

The obverse of the coins reflects the effigy of an imperial person, with an adequate inscription of their name and title. Generally, the names of emperors and empresses are written in the common Greek form of their actual names, which can be easily read on the coin. Unlike the titles that sometimes accompany their names, they might be challenging to understand for those unfamiliar with them. On the coins shown in the catalogue, the following titles are most commonly recognized (there goes the Greek title, with usually appearing abbreviations and the Latin equivalent of the title):

AYTOKRATΩΡ (AY(T). or AYTOK(P.) = IMPERATOR (appears on the coins from Vespasianus onwards); KAICAP (K. or KAI (C)) = CAESAR (not shown on the coins of Marcus Aurelius and Lucius Verus only); ΑΥΓΟΥCTOC (ΑΥΓ.)/ΑΥΓΟΥCTA (ΑΥΓ.) = AVGSTVS/AVGVSTA (on the coins of I. Domna, Tranquillina); CEBACTOC (CEB.)/CEBACTH (CEB.) = AVGSTVS/AVGVSTA (no on S. Severus, Caracalla, and Geta coins); ΓΕΡΜΑΝΙΚΟC (ΓΕΡΜ.) = GERMANICVS (on the coins of Nero, Domitianus, and Traianus); ΔΑΚΙΚΟC (ΔΑΚ.) = DACICVS (appears only on the coins of Traianus); APICTOC (API(CT.) = OPTIMVS<sup>15</sup> (only on the coins of Traianus).

The use of Latin legends on Nero's (Cat. Nos. 2-4) hemidrachms is an exception to the rule of using Greek legends on provincial coinage. Cat. No. 40 presents another oddy exception, where ΑΝΤΩΝΙΟC and Z shaped reverse. Retrograde written letters are unusual in Caesarea on bronze coins. Under Antoninus Pius, they appear only on the coins of years 7 and 9. Perhaps a workshop with little experience was temporarily commissioned with cutting the stamps<sup>16</sup>.

<sup>13</sup> BMC *Galatia*, xxxv.

<sup>14</sup> Sydenham 1978, 3.

<sup>15</sup> The inscriptions above and the ones mentioned in the following paragraph with titles of Emperors were used by D. R. Sear. The author also gives the complete list of the names of the Emperors and Empresses. Sear 2001, xi.

<sup>16</sup> Ganschow 2018, 220.

### Types

Since the use of portraiture was not limited to the emperor alone, it also included imperial rank women, members of his family, and heirs to the throne. A great variety of busts of the emperors and empresses appear on the coins. Usually, the emperor is depicted as a bare-headed, laureate, radiate head or a draped bust wearing cuirass<sup>17</sup> and paludamentum, sometimes as a bust with drapery on a shoulder, and always looking right, except on one coin of Elagabalus, where he is depicted as looking left with a spear and a shield (Cat. No. 100). Empresses' draped busts are shown with or without a diadem or wearing a stephane. "*The Imperial portrait is rather as a sign of loyalty to the Empire, expressed in the person of its ruler*"<sup>18</sup>, and not as mint-authority.

### Reverses of the Coins

#### Legends

Reverse legends usually follow the same order. They start with the name of the city ΜΗΤΡΟΠΟΛΕΣ KAICAPIAC, meaning the *Capital City* of a district or province<sup>19</sup>, shortened to ΜΗΤΡΟ(ΠΙΟ) KAIC(A) in most cases, sometimes followed by the new title of the city ΝΕΩΚΟΡΟC. At Gordianus III and Tranquillina, the inscription Β ΝΕ appears, meaning the title for the city was given the second time, and then legends end with the date (ΕΤ Α, Β, Γ...). Bronze coins are generally dated by the regnal year after the word ΕΤ, ΕΤΟ, ΕΤΟΥC = *anno*. However, the silver coins, in addition to giving the date in the regnal year, record the date by inscribing the year of the consulship of the reigning emperor and naming his titles, as such (there goes the Greek title, with usually appearing abbreviations, and the Latin equivalent):

ΔΗΜΑΡΧΙΚΗ ΕΞΟΥΣΙΑC (ΔΗΜΑΡΧ. ΕΞ.) = TRIBVNICIA POTESTAS (*Power of tribune* - usually granted for life, and renewed from year to year<sup>20</sup>), appears on the silver coins of Traianus (Cat. Nos. 15-21);

ΥΠΑΤΟC Β, ΥΠΑΤΟC Γ, etc. = CONSVL abb. as COS. II, COS. III, etc. (The *consulship* was held from time to time, at least for a part of the year, and during these periods the title appears, with an indication of the number of times the emperor has taken office<sup>21</sup>), is shown on the silver coins of Traianus (Cat. Nos. 15-21), Hadrianus (Cat. Nos. 29-30), Antoninus Pius (Cat. Nos. 34-38), Marcus Aurelius (Cat. Nos. 42-43), Lucius Verus (Cat. No. 48), and Commodus (Cat. Nos. 53-55);

ΠΑΤΗΡ ΠΑΤΡΙΔΟC (ΠΑΤΗΡ ΠΑΤ, ΠΑΤ ΠΑΤΡ) = PATER PATRIAE (*Father of the Fatherlands*), are found on the silver coins of Hadrianus (Cat. Nos. 29-30), Antoninus Pius (Cat. No. 38), and Commodus (Cat. Nos. 53-55).

<sup>17</sup> On many coins of both M. Aurelius and L. Verus (Cat. Nos. 42-43), it is difficult to determine whether a cuirass is intended; but neither is there any trace of a paludamentum. In general, if the outline of the shoulder is seen and it is not draped, it is interpreted as cuirassed. Metcalf 1996, 131.

<sup>18</sup> Mattingly 1960, 196.

<sup>19</sup> The literal meaning of this word is "*mother city*". Still, the title was rarely used to respect the colonies, as many cities that carried this name had never sent forth colonies. For this reason, the word overtook the meaning of the province's chief city. Head 1887, lxxiv.

<sup>20</sup> Abbott 1901, 356, no. 429.

<sup>21</sup> Abbott 1901, 342, no. 402; 376, no. 464.

Furthermore, besides the legends depicting the titles of the emperors, reverses may also record the names and titles of the magistrates. The names of legati appear on bronze coins from Titus to Hadrianus. The legends contain the magistrate's name after the preposition ΕΠΙ, meaning "*in the time of*", and then, in a few cases, follows the title of the magistrate ΠΡΕCCΒΕY TOY of the mean *Legatus*, which was given if the person held the position of the chief magistrate of the city<sup>22</sup>. On Cat. No. 9, the name of the magistrate Aulus Caesennius Gallus is mentioned<sup>23</sup> - ΕΠΙ ΓΑΛΛΟΥ, on Cat. Nos. 12-14, Titus Pomponius Bassus' name ΕΠΙ (ΤΙΤ ΠΟΜ) ΒΑCCΟΥ ΠΡΕCCΒΕY (ΤΟΥ)<sup>24</sup> appears, Cat. No. 22 reveals Marcus Iunius Homullus' name being inscribed as ΕΠΙ ΟΜΟΥΛΛΟΥ<sup>25</sup>, and Cat. No. 33 coin gives the information of the coin being minted under the magistrate Lucius Statorius Secundus - ΕΠΙ ΣΕΚΟΥΝΔΟΥ<sup>26</sup>.

Another essential element of the reverse legends of our listed coins is the epithets given to the city. Despite the usually shortened inscription ΜΗΤΡΟ(ΠΟ) KAIC(A) appearing on most of the reverses, with the bronze coins of Hadrianus (Cat. Nos. 31-32) KAICAP(ΕΩΝ) T(ΩΝ) ΠΡ(ΟC) T ΑΡΓΑΙΩΝ (abb. as KAIC T ΠΡ T ΑΡΓΑΙW) appears. It makes allusions to the proximity of Caesarea to Argaeus<sup>27</sup> with the meaning "*Caesarea next to Argaeus*". This epithet was used only under the Antonine dynasty, after Hadrianus, followed by Antoninus Pius (Cat. Nos. 39-41), Marcus Aurelius (Cat. Nos. 44-47), and Lucius Verus (Cat. Nos. 49-52). The usually shortened inscription of the city changes to its full version ΜΗΤΡΟΠΟΛΕWC KAICAPI(AC) under Severus Alexander (Cat. Nos. 133-137, 146), with one example under Gordianus III (Cat. No. 157). In the reign year 14 of Septimius Severus (Cat. No. 72), ΝΕΩΚΟΡΟC appears for the first time, meaning "*Temple-Keeper*" or a guardian of a provincial temple. It is the title granted to a city when the temples and altars were set up in honor of the Roman Emperor and the Imperial City<sup>28</sup>. It doesn't have much political significance but only indicates goodwill relations between States<sup>29</sup>. At this time, Caesarea was known to be the only city issuing coins with this title<sup>30</sup>. Later ΝΕΩΚΟΡΟC can be found on Iulia Domna's coin (Cat. No. 79), Elagabalus' (Cat. Nos. 90-91), Iulia Maesa's coin (Cat. No. 106), and Severus Alexander's coin (Cat. Nos. 117-118)<sup>31</sup>. Under Gordianus III, the city epithet appears as ΜΗΤΡΟΠ KAICAPIAC, ΕΝΤΙΞ(ΙΟN) B NE. The new word ΕΝΤΙΞΙΟN also seems to be abbreviated to ΕΝΤ, ΕΝΤΙ or ΕΝΤΙX, inscribed on the altar of some of the coins with the Mount Argaeus set on it. This word was first explained by F. Imhoof-Blumer, referring to the

<sup>31</sup> B. Burrell thinks that the second neokoria could happen in the reign of Severus Alexander. Burrell 2004, 249-250.

building of the walls around the city of Caesarea at this time<sup>32</sup> because, during the time of Strabo, the city was not fortified yet, through the neglect of the governors<sup>33</sup>. B ΝΕ indicates that the title ΝΕΩΚΟΡΟC for the city was given the second time.

The names of games and festivals appear as an element of the reverse legend from time to time, inscribed on the field of the coin, named in honor of (CΕΟΥΗΠΙΟC) ΦΙΛΑΔΕΛΦΙΟC, brothers Caracalla and Geta<sup>34</sup> (Cat. Nos. 70, 78, 85).

Dates, however, are not inscribed in any manner on the silver coins of Nero (Cat. Nos. 2-4), Vespasianus (Cat. Nos. 5-7), and Titus (Cat. No. 8). On the other hand, we got one example of a legend appearing on the Nero hemidrachm coin (Cat. No. 2)<sup>35</sup> with Nike holding a wreath and a palm branch, saying ARMENIAC, which indicates a historical allusion to Domitius Corbulo's victories in Armenia in AD 58-59<sup>36</sup>.

### Types

With a few exceptions, the reverses are local in style and have nothing in common with Roman models<sup>37</sup>, resulting in an enormous iconographic variety. The sacred Mount Argaeus, today known as Erciyes Mountain, is the most famous and frequently depicted image on the reverse of Caesarean coins. It rises from the valley to 3916 meters high<sup>38</sup>, making it one of the greatest volcanic mountains in Anatolian geography. Strabo, the famous geographer, describes Argaeus as a tremendous mountain; during his time, flames were observed to rise from the fracture at the base of Argaeus, the sides of the mountain were capped off with forest trees, and the summit was always covered in the snow<sup>39</sup>. Visually, the highest peak appears to be in the middle, between two smaller hills. There is a natural crater behind the summit where an artificial tunnel can be seen; the same crater appears on various coins from time to time<sup>40</sup>. So far, Argaeus is the most depicted mountain in antiquity. Above all, it appears on countless Caesarean coins, which, as the Imperial mint, created a vast volume of embossing<sup>41</sup>.

The surroundings of Mount Argaeus have been localized since the Neolithic cultures, and the cults associated with Argaeus have been influential in the beliefs of the Anatolian people<sup>42</sup>. Therefore, from the earliest times, the mountain was worshipped and has served society as an object of cult<sup>43</sup>. As P. Weiß refers to it, the Holy Mountain achieved

<sup>33</sup> Str. XII. 2. 7 c. 538.

<sup>34</sup> For more information, see below in the paragraph about *Agonistic crowns* on the reverses.

<sup>35</sup> T. Ganschow claims that the series of Nero silver coins, whose obverse legend ends with GERMANI, mean the victories of Domitius Corbulo in Armenia in AD 58. To the same type, he also assigns coins, such as those shown on our Cat. No. 2-4, and puts them under the group named "Undated: 58-59". Ganschow 2018, 59.

<sup>43</sup> Argaeus, derived from the Greek word *Argos*, meaning *white, bright*, is expressed as a white, bright mountain due to the image provided by its physical conditions. Weīß 1985, 24-25.

its name by being volcanically active<sup>44</sup>, as volcanos and volcanic fire scared people of all times. E. A. Sydenham cogitates on the sanctity of the mountain, wondering if it was worshipped as a focal point of a local religious cult or if it was dedicated to some deity. Moreover, beyond a doubt, he believes it is connected with Mithraism since celestial objects such as stars and crescents keep appearing in depictions of Mount Argaeus. On the other hand, E. A. Sydenham also agrees with W. Wroth, claiming that Argaeus could be merged into the Imperial cult under the Empire's influence<sup>45</sup>. Nevertheless, Argaeus became a symbol of Roman power in Cappadocia due to its geographically predetermined importance to the provincial capital, Caesarea<sup>46</sup>.

Mount Argaeus appears in many different forms, either as the leading figure or as an object in the scene. While pyramidal-shaped representations are mainly preferred, there are visuals in which all three peaks are emphasized. The coins of Caesarea depict Argaeus as many-peaked, with trees on its slopes, surmounted either by a wreath, by a star, or by a naked figure. A few examples of Elagabalus', Severus Alexander's, and Iulia Maesa's coins show three-peaked Mount Argaeus with three figures on top (Cat. Nos. 88-89, 97, 105, 117), or three figures with one on each summit (Cat. Nos. 91, 106). Coins of Septimius Severus and Iulia Domna (Cat. Nos. 71, 77) depict three stars on three different mountain peaks. Sometimes a star and a crescent occur on either side, individually or together, in various combinations. One specimen presents Argaeus with an eagle on the summit (Cat. No. 132). It appears to culminate in a tall peak with a conical top on the reverse of Marcus Aurelius and Lucius Verus coins. On one of Traianus's coins, we see Argaeus with a cave on the central summit (Cat. No. 17). Mount Argaeus is typically shown with or without a base, set on a plain, with a garland or wreath (Cat. No. 59) decorated, or the regnal year inscribed altar. Sometimes an agalma of the mountain appears on the body of the altar (Cat. Nos. 93-94), which is enclosed in the distyle (Cat. Nos. 67, 119-120) or tetrastyle (Cat. No. 68) temple, where the altar and the temple give sanctity meaning to the mountain<sup>47</sup>. Further, Argaeus appears between the agonistic prize crowns (Cat. Nos. 70, 78, 85), located between two army stands (Cat. No. 132). Only a few examples depict it in a different scene: between the coin inscription (Cat. No. 156), being held by Tyche (Cat. No. 92), or in the field over the scenery of Septimius Severus driving a quadriga (Cat. No. 66).

A nude male figure, Helios (?), is the most commonly observed symbol atop Mount Argaeus' peak. He wears a radiate crown on his head, holds a sceptre in his left hand and a globe in his right, and appears as a single or triple-figure on the summit or as a figure on each of three peaks. There are various opinions on identifying this personification. W. Wroth is inclined to think "*that the personage represented is the deified Emperor*" himself, at the same time associating it with the Greek Helios as a way to worship the emperor<sup>48</sup>. However, E. A. Sydenham tends to disagree with W. Wroth's presumptions regarding celestial bodies and instead associates him with the cult of Mithra<sup>49</sup>. A. B. Cook

<sup>49</sup> Sydenham 1978, 20. Mithra is a radiate god who emerged from the rocky summits of the eastern

believes the radiate figure on Mount Argaeus to be the Hellenistic Zeus<sup>50</sup>. From the paragraph before, we may deduce that E. A. Sydenham supports W. Wroth's suggestion of Argaeus being merged into the Imperial cult after the power and influence of the Roman Empire rose in the region. On the other hand, E. A. Sydenham faces difficulties connecting Argaeus with the Imperial cult when few figures appear on the mountain<sup>51</sup>. W. Wroth sticks to his opinion and interprets two or more figures as Imperial personages<sup>52</sup>. At this point, P. Weiß tends to believe that three figures are likely to represent the deity in a triple appearance, or three distinct deities, rather than one as the perfection<sup>53</sup>.

Stars, crescents, and pellets are the most prevalent symbols associated with celestial objects. The star is the second most common depiction on the reverse of the coins. The greatest amount is used on the summit of Mount Argaeus. It first appears in our catalogue during the reign of Commodus (Cat. Nos. 53-54), then throughout the reigns of Septimius Severus (Cat. Nos. 63-65), Iulia Domna (Cat. No. 75), Caracalla (Cat. Nos. 80, 83-84), Elagabalus (Cat. Nos. 103-104) and ends with Severus Alexander (Cat. Nos. 110, 113-116). Mount Argaeus is surmounted by three stars, one on each top, on a few examples of the bronze coins of Septimius Severus (Cat. No. 71) and Iulia Domna (Cat. No. 77). Another specimen of Antoninus Pius' Cat. No. 38 coin shows the star placed under Mount Argaeus. Furthermore, one of the Commodus coins depicts a star on the field, by the side of the altar (Cat. No. 58). An example from under the reign of Severus Alexander shows a star on the temple's pediment (Cat. No. 120).

A crescent accompanies the depiction of Mount Argaeus with the star on its summit in a few specimens of our catalogue. On the silver coins of Septimius Severus (Cat. No. 64) and Caracalla (Cat. No. 80), it appears on the left side of the mountain. On the bronze coins of Severus Alexander, it occurs on the left side of the mountain, with the star on the right (Cat. No. 131), and in the same position, but as a mountain enclosed by a distyle temple (Cat. No. 119). When it comes to pellets, they appear on two of our coins. Firstly, the bronze coin of Septimius Severus (Cat. No. 67) shows Mount Argaeus enclosed by the distyle temple with the pellet on its pediment, while the only silver coin of Gordianus III (Cat. No. 149) depicts two pellets, one on each side of the summit of Mount Argaeus.

The third symbol that appears on the summit of Mount Argaeus is a wreath (*Corona Triumphalis*), an item used to crown the triumphs<sup>54</sup>. In ancient Rome, the wreath was the highest medal awarded to victors coming back from wars<sup>55</sup>. It is considered to be

mountains at dawn; yet "he is not sun or moon, or any star, but a spirit of light". Mithra has attributes of guardian and savior, and soldiers were his missionaries. With the victories of armies, Mithraism spread among the soldiers. Finally, under the reign of Tiberius, when Cappadocia was incorporated into the Empire, Pontus under Nero, and Commagene under Vespasianus, the channel from East to West for Mithraism to spread was opened, as it had deep roots in Cappadocia long ago. Dill 1904, 585-593.

<sup>55</sup> Plin. *nat.* XV. V.

the symbol of the Roman legions<sup>56</sup>, which by Tertullianus was named *Corona Militaris*<sup>57</sup>. Therefore, the wreaths of victory were associated with the army, military affairs, war, and the triumph of the whole Roman army<sup>58</sup>. As mentioned above, in our catalogue, the wreath mostly appears on the summit of Mount Argaeus. However, no less, we see it carried by Nike. Most commonly, the depiction of Nike holding the wreath appears from the time of Nero to Hadrianus. Later, we find it only on single coins, one example at a time, on Commodus' (Cat. No. 55) and Iulia Domna's (Cat. No. 79) coins. Further, the wreath appears on the body of the altar on one of the Gordianus III coins (Cat. No. 159). One coin specimen from the Severus Alexander mint shows the wreath in the beak of an eagle standing on the mountain's summit (Cat. No. 132). W. Wroth believes it to be the Roman legion's eagle, and the wreath that surmounts the summit of Mount Argaeus on the other coins must be the same wreath held by it<sup>59</sup>.

The last-mentioned coin reverse, showing Mount Argaeus surmounted by an eagle holding a wreath in its beak, requires our special attention as two military standards, so-called a vexillum, appear. D. R. Sear assigns those coins to colonial type, with standards representing "*the legions from which the original colonists were drawn*"<sup>60</sup>.

Further, clasped hands holding a standard placed on a prow that appears on silver Traianus coins (Cat. Nos. 18, 20) reflect other symbolic meanings referring to Roman legions and depict the agreement of *Concordia Exercituum*<sup>61</sup>. "*This reverse alludes to the concurrence and union of the forces, both on land and at sea*", during the reign of Nerva<sup>62</sup>.

Before moving on to the following type of coins, it is necessary to mention that the right to host games was an honor bestowed upon a city as a sign of the emperor's favor<sup>63</sup>. And so here, on both sides of Mount Argaeus, we observe two agonistic<sup>64</sup>/prize crowns<sup>65</sup> with palm branches. This type appears on the coins of Septimius Severus (Cat. No. 70), Iulia Domna (Cat. No. 78), and Caracalla (Cat. No. 85) and represents the celebration of public games held in honor of members of the Severan dynasty. In these particular cases, KOINOC<sup>66</sup> brings the meaning that the sacred festival was held on the

Erol-Özdizbay 2012, 204.

<sup>65</sup> On the coins, it appeared for the first time during the reign of Commodus and was adopted and spread rapidly during the Severan period. Over time, it has become a symbol of games and festivals. Erol-Özdizbay 2012, 204.

<sup>66</sup> The title "neokoros" on Caesarean coins appears from AD 204-206, at the same time as the sacred

occasion of the provincial assembly meeting and was organized in honor of *Severan Brotherly Love* (ΣΕΟΥΗΡΙΟC) ΦΙΛΑΔΕΛΦΙΟC, associated with Caracalla and Geta<sup>67</sup>. In such a way, Septimius Severus desired to show the public that the brotherly love of two princes could guarantee a blissful future for the Empire<sup>68</sup>.

The other big type group of the reverse of the coins contains a bunch of corn-ears. It is the most frequently used depiction after Mount Argaeus. It appears as a quadruple on the altar, in addition to being seen as a bunch of three or six tied together and four or five ears of corn shown in the kalathos. In our displayed examples, it first arises on the coin of Commodus (Cat. No. 56), where four corn-ears are set on the altar. Continuing with two different coins from this type under Septimius Severus, where four ears of corn are placed on the altar (Cat. No. 74) or three ears tied together in a bunch (Cat. No. 73). Next, we see three examples of Elagabalus's coins depicting four corn-ears on the altar (Cat. Nos. 87, 93-94). Severus Alexander's coins show the broadest spectrum of variety, with either four (Cat. Nos. 122, 143-144) or five (Cat. No. 145) corn-ears in kalathos, four corn-ears set on the altar (Cat. Nos. 121, 125), and three corn-ears tied together (Cat. Nos. 129-130, 138-139, 147-148). One of the Gordianus' III coins first occurs with six ears of corn tied together (Cat. Nos. 161-162), followed by one coin of the same design from Tranquillina's time (Cat. No. 164).

A comparatively small group of reverses depict deities or their personifications. Here, on two didrachm coins of Trajanus, we see Artemis (Cat. Nos. 15, 19), in her huntress role, with a spear in her right hand and a patera in her left. Later, Apollo's graceful naked figure appears with his foot on an omphalos, holding an arrow and a bow in his hands, resting an arm on his knee on the bronze coin of Commodus (Cat. No. 62). On a few exemplary Caesarean coins displayed in our catalogue, there is a noteworthy depiction of Tyche, who was always known as a tutelary deity that governs a city's destiny, fortune, and prosperity. On the coin of Septimius Severus with the inscription of ΝΕΩΚΟΠΟC under the throne (Cat. No. 72), Tyche appears seated on the throne holding cornucopiae and patera; another seated Tyche holding cornucopiae and Mount Argaeus is shown on the coin from Elagabalus' reign (Cat. No. 92). A bust of the turreted and veiled bust of Tyche appears on the bronze coin of Claudius (Cat. No. 1). Nike is another widely used personification famous from early times, with a laurel wreath typically presented in her hands as an integral part of the composition of triumph<sup>69</sup>. The symbol of a palm branch, which frequently appears on Nike coins, is associated with rising and victory, yet it can be interpreted as a triumph over death<sup>70</sup>. Therefore, the whole image is associated with honoring victories. On displayed coins, Nike is depicted as a winged figure in a long dress, advancing or standing, holding a wreath in her hand and a palm branch on her shoulder, while she may also be seen seated on the globe (Cat. Nos. 3, 7) or with her foot on a globe, inscribing the shield set on her knee (Cat. No. 4)<sup>71</sup>. Nike most commonly appears on silver coins from Nero through Hadrianus. Later, it

games of *Severeios Philadelphios*, *koinos* of Cappadocia were celebrated, so it is most likely that at least one of those festivals was connected with the grant of *neokoria*. Burrell 2004, 247, 338.

<sup>71</sup> Engraving on the shield is a practice to celebrate and immortalize victories. Elderkin 1938, 236.

reappears mainly on single coins; one example is found on the didrachm of Commodus (Cat. No. 55) and one on the bronze coin of Iulia Domna (Cat. No. 79).

One of the other rarely used types on the reverse of the coins is a club. It is considered to be taken from the coins of King Archelaus, with the allusion to Heracles<sup>72</sup>. We have only two examples of it in our catalogue. One appears on a drachm of Traianus (Cat. No. 16), and the second on the hemidrachm of Hadrianus (Cat. No. 24).

Images of the Roman Emperor depicted on the civic coin reverses reveal which qualities of the emperor were deemed significant, whether he is shown as a warrior, a guardian of the Empire, or a keeper of the peace. “Whereas in Rome the Imperial worship only began at death, in the provinces it would naturally begin at accession”<sup>73</sup>. Therefore, those images are not particularly prevalent. Here we have the coin of Severus Alexander (Cat. No. 140), which shows the emperor galloping on horseback, wearing chlamys, and holding a javelin in his upraised right hand. As with personal qualities, the image may be associated with military victories or the victorious nature of the emperor as well. The coin of Septimius Severus depicts him victorious in the triumphal chariot carried by four horses (quadriga), with Mount Argaeus pictured above (Cat. No. 66). It was most likely struck shortly after the defeat of Gaius Pescennius Niger’s forces against Septimius Severus’ army at Cyzicus and Nicaea in AD 194, expressing the loyalty of Caesarea to the winner of the civil war<sup>74</sup>.

Further, we see inscriptional coins, where the reverse legend appears engraved in a few lines within a wreath or a dotted border. This article includes eleven distinct coin examples that belong to this group. Firstly, we find it on the bronze coins of Domitianus (Cat. Nos. 12, 14), bearing the magistrate’s name on them. The rest of the coins carry the epithets applied to the city, given in various forms. One coin of Hadrianus (Cat. No. 32), six coins of Severus Alexander (Cat. Nos. 133-137, 146), and two coins of Gordianus III (Cat. Nos. 156, 157)<sup>75</sup>.

### Conclusion

Excluding the highly worn/poor condition and thus less legible similar specimens from the Niğde Museum’s Roman Provincial Coin collection, we have selected and displayed 164 Caesarean coins in our catalogue, spanning all dynasties from Claudius to Gordianus III. Forty are silver coins, and the remaining 124 are bronze.

This paper summarizes the diversity of legends and types of obverses and reverses on Roman Provincial Coins of Caesarea in Cappadocia held in the Niğde Museum’s collection. Based on what is known at this point, it is undeniable that Caesarean coinage is diverse. Considering that each coin in our work reflects the different and peculiar variation of the types and legends concerning both sides of the specimen, the coins in our catalogue are the only and unique, providing invaluable information about the region’s cultural, political, and religious life. The rules for the obverse design are relatively

simple, reflecting the effigy of the imperial person, with an adequate inscription of their name and title, which indicates that the Roman authority and, in other words, the independence of the city ended. On the other hand, the reverses are a great source of information since they are purely local. Since the reverses of the provincial coins had a continuation of certain types used in the minting of coins during the earlier periods of the city's autonomy, many of the coins issued at this time were associated with cults promoted and followed in the area even before the imperial age. The sacred Mount Argaeus, the most famous and frequently depicted image on the reverse of Caesarean coins, appears here, which most likely played a considerable role in people's lives back then by becoming a symbol of the entire Caesarea. Some coins illustrate various aspects of mythology with deities and personifications (Artemis, Apollo, Tyche, and Nike) depicted on the reverses, which gives us an idea of how Greek mythology permeated the life of the city. Other coins depict the celebration of public games organized in honor of the imperial family, which, together with different imperial symbols appearing on the coins, show what part the Empire played in social life. Military-type coins, such as those with clasped hands holding a standard placed on a prow, depicted vexilla, and eagle of the Roman legions, reflect the interest in politics. In other words, it reflects the way that the Empire "played" politics. Further, other coins tell us about some great historical events and the victories of the emperor. Anyhow, it all together reflects the power of the Empire, as in the end, any symbol on the coins could be merged with the Imperial cultus.

However, it is impossible to fully understand how people socialized, what they believed in, and whom they prayed to, but coins definitely can draw the main lines of the picture of the things that prevailed in their lives at those times. In either case, this paper is a source of information and will significantly contribute to future iconographical numismatic studies, with a great variety of coins displayed in our paper. A few sufficiently exceptional specimens will extend the knowledge of Caesarean coins in general.

### Catalogue of Coins

The description of each coin is followed by a reference, where possible. Auction catalogues have been used as a reference when there are none or when the coin has only a few references from published scientific catalogues or online museum collections. After that comes the catalogue number, metal, diameter, weight, die-axis, and inventory number.
